| STAFF: Rob Dickman                                 | COMPLIANCE STATUS: Compliance | SOURCE CLASS:             |
| SUBJECT: Scheduled inspection of this minor source |                               |                           |
| RESOLVED COMPLAINTS:                               |                               |                           |

Inspected this source with respect to Permit to Install 285-05. This source has not been inspected previously. This is a very small fuel oil fired incinerator, commercially made, with afterburner control. It was not in use at the time of the inspection. It appeared in fair physical condition. The owner/operator of the unit is required to keep records of the date, time, and approximate weight of the waste consumed by the unit and also the secondary afterburner temperature during use. These records are being loosely kept with some data missing. It was noted that the set points, in terms of operating temperatures for the unit, were in compliance with permitting and that the stack associated with the unit appeared compliant. While the records regarding the unit were not as complete as required, I believe the unit itself is being operated correctly.

I provided some guidance regarding recordkeeping for the unit and also provided a spreadsheet that could be used and contained the necessary items for proper recordkeeping. It is recommended that this unit be inspected again in the next fiscal year to ensure proper recordkeeping is being performed. No further action is recommended.
