INTEROFFICE COMMUNICATION

---

November 10, 1998

TO: File for N-stearoyl-4-aminophenol (CAS #103-99-1)  
FROM: Cathy Simon, Supervisor, Toxics Unit, Air Quality Division  
SUBJECT: Change in the Initial Threshold Screening Level (ITSL)

The ITSL for N-stearoyl-4-aminophenol has been changed from 0.04 ug/m<sup>3</sup> to 0.1 ug/m<sup>3</sup> based on an annual averaging time.

The change in the ITSL was made due to a revision in the State's air toxic rules which became effective on November 10, 1998. Previously, the ITSL had been set pursuant to Rule 232(i). This rule sets the ITSL at a default value of 0.04 ug/m<sup>3</sup> (annual average) when no specific data are available to determine an ITSL. The November 10, 1998 revisions to the rules changed this default ITSL to a value of 0.1 ug/m<sup>3</sup>.

No updated review of the literature has been done since the ITSL was originally set at a value of 0.04 ug/m<sup>3</sup>, to determine if new data are available for this compound.

INTEROFFICE COMMUNICATION

January 27, 1993

TO: File for N-Stearoyl-4-Aminophenol (Cas No. 103-99-1)

FROM: Cathy Simon

SUBJECT: ITSL for N-Stearoyl-4-Aminophenol

The ITSL for N-stearoyl-4-aminophenol is 0.04  $\mu\text{g}/\text{m}^3$  based on an annual average.

The following references or data bases were searched to identify data to determine the ITSL: RTECs, EPB library, IRIS, HEAST, NTP Management Status Report, and CAS Online (1967-Jan 24, 1993). No toxicological data was identified in this search. The ITSL was set at 0.04  $\mu\text{g}/\text{m}^3$  pursuant to Rule 232(1)(i), since no toxicological data were available to determine the ITSL.
