TO: Acryloyloxyethyl trimethyl ammonium chloride file (CAS # 44992-01-0)  
FROM: Gary Butterfield  
SUBJECT: Screening level for acryloyloxyethyl trimethyl ammonium chloride

A June 9, 1999 on-line search of CAS and NLM found no published toxicity information being available for acryloyloxyethyl trimethyl ammonium chloride. Toxicity information for this material was also not found in the standard secondary toxicity references (RTECS, NIOSH, ACGIH, EPA's IRIS, NTP, IARC, etc.).

Due to a lack of available information the screening level is being established at the default value of 0.1 ug/m<sup>3</sup> with annual averaging, under R232(i).
