## EXECUTIVE SUMMARY

DTE Energy's Environmental Management and Safety Environmental Field Services Group (DTE) conducted a Relative Accuracy Test Audit (RATA) at the Belle River Power Plant (BRPP) Dean CTGs, located in China Township, Michigan. The fieldwork, performed on November 4-7, 2024, was conducted to satisfy Michigan Renewable Operating Permit conditions for DTE Electric Company, Belle River Peakers (MI-ROP-N2796-2024).

The results of the RATA testing are highlighted below:

**O<sub>2</sub>, NO<sub>x</sub> and CO RATA Results**  
**Turbine Units EU-CTG01-DP through EU-CTG04-DP**  
**Belle River Power Plant**  
**Dean Peaker's**

## 1.0 INTRODUCTION

DTE Energy's Environmental Management and Safety Environmental Field Services Group (DTE) conducted a Relative Accuracy Test Audit (RATA) at the Belle River Power Plant (BRPP) Dean CTGs, located in China Township, Michigan. The fieldwork, performed on November 4-7, 2024, was conducted to satisfy Michigan Renewable Operating Permit conditions for DTE Electric Company, Belle River Peakers (MI-ROP-N2796-2024).

Testing was performed pursuant to Title 40, *Code of Federal Regulations*, Part 60, Appendix A (40 CFR §60 App. A), Methods 3A, 7E, 10, 19, Part 75 Appendices A & B, and Part 60 Appendix B Performance Specifications 2, 3 and 4A.

The following DTE personnel participated in the testing program: Mark D. Westerberg, Senior Specialist - Environmental, Fred Meinecke, Specialist, and Kenneth R St. Amant, Specialist. Mr. Westerberg was the project leader. Mr. Joseph R. Grave, Lead O & M Technician at Belle River Power Plant Dean Peaker's, provided process coordination for the testing program.

## 2.0 SOURCE DESCRIPTION

The Belle River Power Plant is a DTE Energy facility located at 4505 King Road in China Township, Michigan. The plant has four (4) simple cycle stationary combustion turbines at the Dean site, referred to as Units EU-CTG01-DP through EU-CTG04-DP operating as Peaker units.

Each combustion turbine includes a compressor, combustor, turbine and electric generator with a nominally rated load capacity of 82.4 megawatts (MW) at perfect conditions in simple cycle operation.

NO<sub>x</sub> emissions are controlled by dry low NO<sub>x</sub> technology and good combustion practices. CO emissions are controlled by good combustion practices and SO<sub>2</sub> emissions are controlled by utilizing low sulfur natural gas.

The RATA testing was performed while each Unit operated at full load conditions.

The exhaust stacks for Units EU-CTG01-DP through EU-CTG04-DP are rectangular ducts approximately 60 feet tall with an internal equivalent diameter of approximately 12 feet. See Figure 1 for a diagram of Units EU-CTG01-DP through EU-CTG04-DP sampling locations and stack dimensions.

Dean Peaker's utilizes Thermo-Fisher Scientific Continuous Emissions Monitoring Systems (CEMS) to record emissions during unit operations. The following Units were audited:

<b>Unit</b>	<b>Analyzer</b>	<b>Manufacturer / Model</b>	<b>Serial Number</b>
EU-CTG01-DP	NO <sub>x</sub>	Thermo-Fisher Sci 42IQ/LS	12108911584
EU-CTG01-DP	O <sub>2</sub> /CO	Thermo-Fisher Sci 48IQ	12108911588
EU-CTG02-DP	NO <sub>x</sub>	Thermo-Fisher Sci 42IQ/LS	12108911585
EU-CTG02-DP	O <sub>2</sub> /CO	Thermo-Fisher Sci 48IQ	12108911589
EU-CTG03-DP	NO <sub>x</sub>	Thermo-Fisher Sci 42IQ/LS	12108911582
EU-CTG03-DP	O <sub>2</sub> /CO	Thermo-Fisher Sci 48IQ	12101137279
EU-CTG04-DP	NO <sub>x</sub>	Thermo-Fisher Sci 42IQ/LS	12108911583
EU-CTG04-DP	O <sub>2</sub> /CO	Thermo-Fisher Sci 48IQ	12108911586

### **3.0 SAMPLING AND ANALYTICAL PROCEDURES**

Emissions measurements were obtained in accordance with procedures specified in the USEPA *Standards of Performance for New Stationary Sources*. The sampling and analytical methods used in the testing program are indicated in the table below.

<b>Sampling Method</b>	<b>Parameter</b>	<b>Analysis</b>
USEPA Method 3A	Oxygen	Instrumental Analyzer Method
USEPA Method 7E	Oxides of Nitrogen	Chemiluminescent Analyzer
USEPA Method 10	Carbon Monoxide	NDIR Instrumental Analyzer Method

### **3.1 OXYGEN, OXIDES OF NITROGEN AND CARBON MONOXIDE (USEPA METHODS 3A, 7E AND 10)**

#### **3.1.1 Sampling Method**

Oxygen ( $O_2$ ) emissions were evaluated according to Performance Specification (PS) 3 "Specifications and Test Procedures for  $O_2$  and  $CO_2$  Continuous Emission Monitoring Systems in Stationary Sources" utilizing USEPA Method 3A, "Gas Analysis for Carbon Dioxide, Oxygen, Excess Air, and Dry Molecular Weight (Instrumental Analyzer Method)". The  $O_2$  analyzer utilizes a paramagnetic sensor.

Oxides of Nitrogen ( $NO_x$ ) emissions were evaluated according to Performance Specification (PS) 2 "Specifications and Test Procedures for  $SO_2$  and  $NO_x$  Continuous Emission Monitoring Systems in Stationary Sources" utilizing USEPA Method 7E, "Determination of Nitrogen Oxides Emissions from Stationary Sources (Instrumental Analyzer Procedure)". The  $NO_x$  analyzer utilizes a Chemiluminescent detector.

Carbon monoxide (CO) emissions were evaluated following the Performance Specification (PS) 4 and 4A "Specifications and Test Procedures for Carbon Monoxide Continuous Emissions Monitoring Systems in Stationary Sources" utilizing USEPA Method 10,

"Determination of Carbon Monoxide Emissions from Stationary Sources". The CO analyzer utilizes a NDIR detector.

### **3.1.2 O<sub>2</sub>, NO<sub>x</sub> and CO Sampling Train**

The EPA Methods 3A, 7E and 10 sampling system (Figure 2) consisted of the following components:

- (1)Heated stainless steel sampling probe with heated filter.
- (2)Heated Teflon™ sampling line.
- (3)Universal® gas conditioner with particulate filter.
- (4)Flexible unheated Teflon™ sampling line.
- (5)Servomex 1400 O<sub>2</sub>/CO<sub>2</sub> gas analyzer TECO 48i Chemiluminescent NO<sub>x</sub> gas analyzer and TECO 48C NDIR CO gas analyzer.
- (6)USEPA Protocol 1 calibration gases.
- (7)Data Acquisition System

### **3.1.3 Sampling Train Calibration**

The O<sub>2</sub>/NO<sub>x</sub>/CO sampling trains were calibrated following the procedures outlined in USEPA Methods 3A, 7E and 10. Zero, span, and mid-range calibration gases were introduced directly into the O<sub>2</sub>, NO<sub>x</sub> and CO analyzers to determine the instruments linearity. A zero and mid-range span gas was then introduced through the entire sampling system to determine sampling system bias for each analyzer. Additional system calibrations were performed at the completion of each test.

### **3.1.4 Sampling Duration & Frequency**

The RATA testing of the Units EU-CTG01-DP through EU-CTG04-DP O<sub>2</sub>, NO<sub>x</sub> and CO CEMS consisted of the best 9 of ten 21-minute samples at the test platform level of each unit's exhaust stack. Prior to conducting the RATA, a 12-point stratification check was performed on each unit according to 40CFR Part 75, Appendix A, Section 6.5.6 procedures. Based on the results of the stratification checks the sampling was conducted at a centroidal area of the duct. Sampling was performed simultaneously for O<sub>2</sub>, NO<sub>x</sub> and CO. Data was recorded as 1-minute averages. The results are included in Appendix A.

### **3.1.5 Quality Control and Assurance (O<sub>2</sub>, NO<sub>x</sub> and CO)**

All sampling and analytical equipment were calibrated following the guidelines referenced in Methods 3A, 7E and 10. Calibration gases were EPA Protocol 1 gases. The analyzer spans for Units

EU-CTG01-DP through EU-CTG04-DP RATA testing were 0-19.28% (19.28, 9.983, and zero) for O<sub>2</sub>, 0-17.85 ppm (17.85, 8.137, and zero) for NO<sub>x</sub>, and 0-8.984 ppm (8.984, 4.847 and zero) for CO. The 9.983% O<sub>2</sub> gas was used to zero the NO<sub>x</sub> and CO analyzers and the 8.137 ppm NO<sub>x</sub> gas was used to zero the O<sub>2</sub> analyzer.

Calibration gas certification sheets are included in Appendix C.

### **3.1.6 Data Reduction**

The NO<sub>x</sub> and CO emission readings in parts per million, dry (ppm<sub>dry</sub>) and O<sub>2</sub> emission readings in percent (%) were recorded at 4-second intervals and averaged to 1-minute increments. The O<sub>2</sub>, NO<sub>x</sub> and CO emissions were drift corrected utilizing pre and post-run calibration data. The O<sub>2</sub> data was used to convert the NO<sub>x</sub> ppm data to pounds per million British thermal units (lb/MMBtu).

The RM data collected for the Units EU-CTG01-DP through EU-CTG04-DP testing can be found in Appendix A.

Corresponding CEMS data collected during the Units EU-CTG01-DP through EU-CTG04-DP testing can be found in Appendix B.

RA calculations are based upon calculations found in USEPA Methods 3A, 7E, 10, 19 and PS2, 3, 4 and 4A. Example calculations can be found in Appendix D.

## **4.0 OPERATING PARAMETERS**

Each Unit was tested at full load conditions which were determined by plant personnel. Load in terms of megawatts (MW) are included with the CEMS data located in Appendix B.

## **5.0 RESULTS**

Tables 1 through 4 present the RATA testing results from Units EU-CTG01-DP through EU-CTG04-DP. The O<sub>2</sub>, NO<sub>x</sub> and CO monitors passed the RATA following the specifications of 40CFR60 – Performance Specification 2, 3, 4 and 4A and 40CFR75. The O<sub>2</sub> relative accuracy, calculated as %, met the criteria of <1.0% mean difference for all 4 units. The CO relative accuracy, calculated as ppm met the criteria of <5 ppm

mean difference for all 4 units. The NO<sub>x</sub> relative accuracy, calculated as pounds per million British Thermal units (lb/MMBtu), met the low emitter criteria of <0.015 lb/MMBtu mean difference for all 4 units. In addition, unit (EU-CTG01-DP) had a bias adjustment factor (BAF) = 1.111, unit (EU-CTG02-DP) had a BAF = 1.100, unit (EU-CTG03-DP) has a BAF = 1.111, and unit (EU-CTG04-DP) has a BAF = 1.111 per 40CFR75 criteria.

## 6.0 CERTIFICATION STATEMENT

"I certify that I believe the information provided in this document is true, accurate, and complete. Results of testing are based on the good faith application of sound professional judgment, using techniques, factors, or standards approved by the Local, State, or Federal Governing body, or generally accepted in the trade."
