This letter is in response to the violation notice coming out of the site inspection you performed on December 18th, 2018. The violation notice was with regards to our backup generator. Our generator was not certified in compliance with 40 CFR Part 60-Subpart JJJJ- Standards of Performance.

We are working with Total Energy Systems, LLC our local Kohler distributor. They have been made aware of our need for testing according to the appropriate standard and are in the process of preparing a quote. We have been told the quote will be ready in the next few days and testing will be able to be performed within a week or two.

Our generator was installed in December 2006, and is only in use for a few minutes each month while our maintenance department performs an operation check. When the generator was installed it was not know that testing according to 40 CFR Part 60 was required. As stated above we are working closely with Total Energy Systems to perform the appropriate testing and correct the nonconformance.

I will be in contact with you during every step of the certification process.

Thank You

Jeff Poniewierski
