RE: Violation Notice – 7/24/19 On-Site Inspection via the Department of Environment, Great Lakes, and Energy (EGLE). ROP # MI-ROP-B7711-2016

Cody,

During the inspection on July 24th, 2019, it was noted that the Holland, Michigan facility for Sherwin Williams was operating cold cleaners that ventilated outside. It was noted that when Hexane was in use, the facility would be in violation of Part 7, specifically 707(3)(a)(i). It was identified that Acetone was being used in the cold cleaners, however to meet the exemption of Rule 290 a log of Acetone usage must be maintained for each cold cleaner that ventilates to the outside.

Currently a log has been created for each cold station and personnel are in active training regarding expectations for Acetone usage only and feasibility of 1000 pounds/150 gallons per month. The correction is in training & implementation status and will be reviewed monthly. The logs will be gathered at the end of each month, beginning with November 2019 and filed with existing documentation required by the site ROP. Should you have any questions, please contact me at 616-392-7811 x226.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ron Zibbell Jr.'.
