05/30/2018	MAERS	Compliance	<p>2017 MAERS report received on 3/9/2018. AQD audited the report and approved it. Please refer to the audit comments below.</p> <p>AUDIT COMMENTS: In 2017 the total VOC emissions (19,663 pounds) were slightly higher than the emissions reported for year 2016 (18,858 pounds). The highest VOC contribution comes from truck rack loading operations representing 63 % of the total, 31% from tanks standing/working losses, and the remaining 6% are from fugitives emissions and roof landing. (No tank cleaning this year) With the exceptions of TK 4 reporting, the changes in VOC emissions for the individual EU correlate with throughputs and historical data. AQD found an incongruence in TK 4 - The VOC emissions reported for Standing/Working Losses don't correlate with the 21.1 % decrease in throughput; however, this would not have a significant impact because the emissions from this EU represent only 0.04 % of the total emissions.</p>
