Documentation of Abatement for Citations

Dear Sam Liveson:

The following is information on the items that are now abated. The details are as follows:

Burnout Ovens 3 and 4

Violations occurred: June 15, 2016

To the best of our knowledge the improper loading and usage of the afterburners was limited to June 15, 2016. It is our belief that if there were other instances they were isolated instances and not systemic. The established loading and afterburner procedures were not followed.

The violations are not ongoing.

The employees have been re-trained on proper loading of ovens and usage of afterburners and emphasized enforcement and consequences of not complying with the established procedures regarding the use of the burnout ovens.

In order to prevent reoccurrence the supervisor and management are spot checking to verify that the procedures are being followed.

Stack Dimensions Burnout Oven 1

The stack for Burnout Oven 1 is 29.5 feet tall and 12 inches in diameter.

800 Fred Moore Highway, St. Clair, MI 48079
