RE: LOV for Permit #75-12 SRN #N6345
Garfield 1-/2-8

Dear Ms. Owens:

This letter is in response to a Violation Notice received on March 23, 2015 for the above referenced source. Although, Breitburn does not believe this to be a violation, the language in the PM/MAP needed updating to address the situation where a temperature rise across the catalyst is not measured but emission targets are still being achieved. Accordingly, we have attached a revised PM/MAP for this location.

We have been closely monitoring the operations of this engine, months prior to your records request. We've had emissions tests in an inverted temperature scenario as well as testing at normal temperatures. All testing showed no abnormal conditions of the 3 way catalyst.

Please contact me should you need any further information.

Sincerely,

A handwritten signature in cursive script that reads "Carolann Knapp".
