Re: Tribar Technologies Plant 4 (N7809) – PTI 115-07B – Response to Violation Notice Dated April 6, 2023

Dear Mr. Dziadosz:

Tribar Technologies Inc. (Tribar) has prepared this letter with assistance from Barr Engineering Co. to address the issues outlined in the Michigan Department of Environment, Great Lakes, and Energy, Air Quality Division Violation Notice dated April 6, 2023. The violation notice (VN) alleges the following:

Process Description	Rule/Permit Condition Violated	Comments
FGCHROME	SC VI. 8 and 9	As part of the records review, the facility was asked to provide surface tension records for tanks 5, 6, and 50 for December 2021- December 2022. As of April 5, 2023, the records for December 2021 have not been received.

The records for December 2021 are provided as an Excel table attachment via email.

In review of the records for December 2021 and records previously provided by Tribar personnel, the information recorded in TrueLogic does not represent the full process employed by plant personnel in managing the fume suppressant surface tension. After determining suppressant is needed via measurement, plant personnel add the requisite fume suppressant and remeasure to confirm the required surface tension is achieved. This remeasured value historically was not recorded in TrueLogic. Effective 4/11/2023, the rechecked values are recorded within TrueLogic.

If you have questions or require additional information, please feel free to reach out to me.

Sincerely,

Alexandria Muench

Alexandria Muench, Tribar Technologies Inc. Environmental Manager
