**RE: Violation Notice
Harvest Oak Manufacturing
Permit to Install Number 143-17**

Dear Dennis:

On October 25, 2017, DEQ, AQD, conducted an inspection of Harvest Oak Manufacturing located at 804 North Matteson Street, Bronson. During the inspection, staff of AQD observed that equipment was installed and operating with out a Permit to Install.

Harvest Oak Manufacturing started construction of the emission units on June 1, 2017. On August 1, 2017 the construction was completed. Following construction they began working on product development. On August 18, 2017 a General Permit to Install was applied for. Once the General Permit to Install was reviewed by MDEQ, they found that a Permit to Install application was necessary. On September 15, 2017 a Permit to Install application was submitted.

Nick Carlson with MDEQ, AQD is currently working on Harvest Oak Manufacturing Permit to Install # 143-17.

Harvest Oak Manufacturing's actual emissions are under 10 ton VOC annually, with minimal HAP emissions.

With proper planning strategies, Harvest Oak Manufacturing will not install, construct, operate, reconstruct, relocate or alter any process or process equipment which may be a source of an air contaminant with out the correct issued permit in the future.

Please review this information and should you have any further question, please do not hesitate to contact me at 517-781-4044 or at jb@harvestoakmanufacturing.com. Thank you for your consideration in this matter.

Sincerely,

James E. Brock III
Harvest Oak Manufacturing
