RE: Formal Response

Formal Response

In response to the Settlement Meeting held on July 9<sup>th</sup> and Kro-Pro's desire to be in compliance with the findings of said meeting, the following steps have been initiated to accomplish this objective.

1. Review and gather all data regarding all processes conducted at Kro-Pro that may impact air emissions. This includes product specifications, MSDS sheets, cleaning/maintenance protocol, typical production activity operational standards and procedures for the Permit to Install (PTI) application.
2. Contact Jenifer Dixon at the Clean Air Assistance Center regarding guidance in the preparation of the PTI application and to gain knowledge and direction to become a CLEAN CORPORATE CITIZEN.
3. Submit the PTI application. Scheduled Target Date for submission: July 27, 2018.
4. Continue to monitor, collect, and maintain concise records of chrome tank surface tension as required by NESHAP. We will use the compilation of stated records to submit ongoing compliance status reports as required.
