June 1<sup>st</sup>, 2021

To Ms. Jenine Camilleri,

On April 28th, 2021, we were notified of a complaint regarding dust originating from our property at 225 E. Columbia Ave., Pontiac MI.

On that day Dani's Transport Inc. was indeed struggling to maintain control due to multiple factors, high winds in the area, and a COVID outbreak in that location that affected both our yard and shop teams. Three employees were out for over two weeks (April 16th-May 2nd). Normally our mechanics fill in for yard sweeping and watering during our yard maintenance persons' absence. Unfortunately, he was in contact with the mechanics in our shop and all were affected.

We have made alternative coverage plans, including our manager to act as a backup in extreme circumstances. During our corrective action session, it was also discussed the water fill is slow and the broom was not as efficient as other equipment options. We purchased and set up a 10,000-gallon holding tank to have additional water during dry days. We also are renting a better-suited broom until we purchase a new unit. We have been looking into other additional controls but they are reliant on additional water supply from the city of Pontiac.

Our new controls have resolved the dust issues and we will continue to improve our process. If you have any questions, you can feel free to contact me directly.

*Sincerely,*

*Jeremy Raymo
