The following is a response to the violation U252405575 received on December 16, 2024.

Process Description	Section Violated	Comments
On 12/10/2024 and 12/12/2024, demolition inspections were made at various addresses in Genesee County based on the various Notification's project schedules. Upon arrival no work had occurred, and none was occurring.	40 CFR §61.145(b)(3)(iv)(A)(2)	Failed to provide the administrator with written notice of the new start date.

The violation occurred on 12/9. Leadhead was unable to adhere to our scheduled demolitions due to issues with the water meter and backflow preventer fit. Leadhead failed to update the notification timely due to an administrative oversight. Corrective action has taken place to include an updated process to communicate schedule changes.

Leadhead will have a daily call with field team to discuss the status of properties and identify changes to the schedule. An email will be sent to the EGLE representative of any known changes and the Notification of Intent to Renovate/Demolish revised prior to the project's scheduled start date. Leadhead does not anticipate this violation being an ongoing concern. In addition, modifications and repairs have been made to the water meter and backflow preventer. These specific concerns were rectified on December 19th, 2024. The issue is resolved, no further actions are needed to move forward.

Thank you for the opportunity to address the violations.
