***Re: Response to Violation Notice SRN/IE: U61707435; Lenawee County***

Midwest Environmental, Inc. (MEI) recently performed the asbestos abatement work at Bixby Medical Hospital, 818 Riverside Avenue, Adrian, Michigan.

Bixby Hospital was originally built in 1957 with the Fisk-Palmer Wing added in 1965, with Additions added in 1967, 1968, 1979, early 1980s, 1989, and 1991. Considering all the additions of the hospital, over the past 67 years, the task was to determine where all asbestos containing materials were located behind walls and ceilings. MEI spent several hours performing partial demolition of walls and ceilings throughout the entire facility to reveal and remove all regulated asbestos containing materials.

MEI understands that an inspection on 10/7/2024 observed TSI in the basement. MEI was quick to respond and remove the asbestos containing TSI that was identified. MEI is hopeful that EGLE will consider the layout of the facility and the effort that was made to uncover and remove all the asbestos containing materials.

Sincerely,

Scott Sellers  
Account Executive
