RECEIVED

DEC 18 2019

AIR QUALITY DIVISION
GRAND RAPIDS DISTRICT

After the November 7, 2019 visit from Adam Shaffer I contacted Bruce Whipple with G.R.I.P.S. (please see attached service work order).

He did reset the afterburner oven. He also inspected the oven and suggested to better obtain and maintain the 1400 degrees required we service the oven with new door gaskets and fill any and all areas that would draw in cold air.

We are looking at where we can purchase the new gaskets and insulation and get pricing. We hope to be able to finish the whole project by the end of March 2020.

In reference to the data collection of the time and temperatures, Expert Coating had a transition of employees and lost the person making the entries. Because of that, those turning the oven up were not keeping track of the required information. We noticed that at a point and so Menno Klimek started keeping the records and is doing so now. The three of us, Menno Walter and myself (Erik) Klimek are watching the oven and keeping up with the data entries.

I have also attached the sheet we will use to keep track of how much coating is out into the coating tanks. We had two 55 gallon drums left of the order from September 18, 2019. The log shows when they were put into service.

If there is anything else I or we can do, please let us know.

Sincerely,

Erik M. Klimek

President
