Dear Aaron White:

**VIOLATION NOTICE**

On October 10, 2022, the Department of Environment, Great Lakes, and Energy (EGLE), Air Quality Division (AQD), conducted an inspection of Central Asphalt Inc located at 2290 May Street, Mount Pleasant, Michigan. The purpose of this inspection was to determine Central Asphalt Inc's compliance with the requirements of the federal Clean Air Act; Part 55, Air Pollution Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (Act 451); the Air Pollution Control Rules; and the conditions of Permit to Install (PTI) number 74-86B and to investigate complaints regarding odors attributed to Central Asphalt Inc's operations.

During the inspection and subsequent discussions, staff noted the following:

Process Description	Rule/Permit Condition Violated	Comments
Loadout from silos	EU Silos III (1)	The loadout capture system is not adequately capturing emissions. Expansion of loadout capture system remains un-updated
Liquid asphalt tanks	R 336.1201(1)	Tanks do not have vapor condensation / recovery or equivalent

During this inspection, it was noted that Central Asphalt had liquid asphalt tanks that did not have vapor condensation / recovery or equivalent. The AQD staff advised Central Asphalt Inc that this is a violation of Rule 201 of the administrative rules promulgated under Act 451. It was subsequently confirmed the company has opted for installation of condensation controls or equivalent. It is acknowledged that installation of controls could not be performed until the plant had ceased operation for the season which occurred November 12, 2022.
