Attn: Adam Shaffer

Dear Mr. Shaffer,

This letter is in follow-up to the violation noticed received June 7th, 2017. This violation occurred with the inspection on March 28th, 2017 looking at the records of 2016 and the current process to date. The violation of notice states that process FGISADHESIVE was in improper determination of VOC content and incomplete records. Also, it was stated that FGFACILITY was in violation with improper determination of the HAP/VOC content and incomplete records. Both process fell into non-compliance with an absence in position of the environmental requirements in the facility for the end of 2016, which held up some record keeping. This has been corrected and new management in the position has been taking the steps for proper documentation and records of usage in the required areas. In those respected areas usage documented have been posted to keep track and record of exact usage on each month. Those are to be collected at the end of the month and documented for further use starting in July 1st, 2017. For determining the correct VOC or HAP content for the above process's, this has been requested to receive formulation data/Technical data sheets for the chemicals that are required to be monitored. These formulation sheets will be compared to the data sheets that have been in use to compare the correct data needed for calculations. American Seating will also produce a letter of use of formulation sheets instead of the Air permit test method 24. The 2016 MAERS report will be resubmitted as part of the request in the latter of violation notice. This will be a corrected version of the 2016 MEARS report that more accurately identifies the reported emissions of the year with a full year of collected data. In Which, will be completed by the end of the week ending June 30th, 2017.

Please contact me at 616-732-6650 if you have any questions.

Sincerely,

Kyle GeBraad
