Subject: Violations:

Dear Mr. Dunlap, Per your letter of June 7, 2018 We have made the following changes. The defective dust collector on the steel shot machine has been fully repaired. We no longer have steel shot dust going out of the building. The dust is contained in the dust collector inside the building. As for processing the break shoes, we have suspended and informed our customer that we will not be able to continue processing their break shoes until we have the proper permitting. We will be ordering and installing new circular chart readers for the ovens from the manufacturer. We have had discussions with our employees on the importance of not overloading ovens that can cause the afterburner to not be able to keep up. I will make sure that our MSDS sheets from our customers are up to date.

I'm out of the state until the end of June but am working remotely. I can be reached at danielmartin@charter.net or my mobile number is 269-251-7305.
Sincerely, Dan Martin, Martin Products Company
