Mr. Cody Yazzie,

Per our conversation this morning, i have received the violation notice signed by you. We have ceased all coating activities outside of the building after the date of your inspection and do not exhaust anything outside of the building. We have multiple dust collection equipment within the building to deal with any particulate matter as i have shown you during your visit. We were not aware of the requirement to maintain records associated with paint usage on the 8300 product we purchase through Home Depot. I have contacted Bear directly and i also included their official response that refutes that any violation occurred and also a complete set of data sheets for this product and instruction for its use. This not withstanding we fully intend to comply with your requests which seem reasonable and appropriate in order to quickly resolve any concerns you may have to the contrary.

For the record. from January 1, of this year until May 29 of 2019 we have officially purchased 32 gallons of this material for which we have receipts and we will maintain these on file from this point forward for the period of two years that you have indicated. So we are currently using 6.4 gallons per month on average and project our total annual usage shall not exceed 76.8 gallons for this calendar year. I will also send a written paper response of same and attached list of actual receipt copies for all purchases of paint up through and including the current month with the written and signed response.

Sincerely,

Don E. Schmidtke
