| SUBJECT: On-site Inspection and Records Review | | |
| RESOLVED COMPLAINTS: | | |

On Tuesday, December 28, 2021, Caryn Owens of the Department of Environment, Great Lakes, and Energy (EGLE) – Air Quality Division (AQD) conducted a scheduled on-site field inspection of Arbor Operating, LLC – Stimpson T Central Processing Facility (N6235) located at 6250 Cunningham Road, in Kalkaska, Kalkaska County, Michigan. More specifically, the facility is located on a two-track road, approximately one mile south of Covert Road, in Kalkaska, Kalkaska County, Michigan. The purpose of this inspection was to determine the facility’s compliance with Permit to Install 103 -97.

Source Description

Upon arrival at the facility, the site was covered in snow, and the weather conditions were cloudy, with winds 0-5 miles per hour from the northeast, and approximately 26 degrees Fahrenheit.

The site contained seven structures and three shed-like structures. There was no equipment operating at the site, and it was very quiet during the inspection. AQD did not access any of the structures during the inspection for safety purposes. A tank battery with three above ground storage tanks were located on the southeast portion of the site, and a glycol dehydrator was located on the southwest portion of the site, along with a blow down tank. A compressor building was located on the northern portion of the site in the western-most building. No stacks were extruding from the roofs of the structures. The remainder of the site consisted of transmission lines and storage of dismantled equipment.

On December 1, 2021, AQD requested records for the facility for the reporting period of November 1, 2020 through October 31, 2021. As of January 19, 2022, AQD has not received records for the facility.

Evaluation Summary

Based on the AQD unable to obtain records for the facility, the facility is in violation with the reporting requirements of PTI 103-97. On January 19, 2022, AQD submitted a violation notice to Arbor Operating LLC, since the records were not readily available for AQD to review.
