AIR QUALITY DIVISION
ACTIVITY REPORT: Scheduled Inspection

N790747591

FACILITY: JORDAN DEVELOPMENT COMPANY, L.L.C. - SPRINGDALE 16		SRN / ID: N7907
LOCATION: NW SW SE SEC 16, SPRINGDALE TWP		DISTRICT: Cadillac
CITY: SPRINGDALE TWP		COUNTY: MANISTEE
CONTACT:		ACTIVITY DATE: 01/15/2019
STAFF: Chance Collins	COMPLIANCE STATUS: Compliance	SOURCE CLASS: SM OPT OUT
SUBJECT: Scheduled Inspection and Review of Records for FCE		
RESOLVED COMPLAINTS:		

On January 7, 2019 AQD staff traveled to Manistee County to perform an inspection of the Jordan Development Company, LLC Springdale 16 CPF. The purpose of the inspection was to determine the facility's compliance with Permit to Install No. 361-07 and applicable state and federal air pollution control regulations. Facility is subject to 40 CFR Part 63 Subpart ZZZZ and HH which the DEQ is not delegated to enforce. AQD staff noted that the facility permit consists of a glycol dehydration system and a compressor engine.

AQD staff arrived on site at 10:56 a.m. to rainy conditions with a temperature of 31°F with a SE wind of 13 mph. There were noticeable/no noticeable odors upon arrival.

The facility currently consisted of a tank battery consisting of 14 storage tanks. The tanks are for produced water, condensate and sweet crude oil. There are 7 heater treaters, none of the heaters were operating at time of inspection. There was no engine shed located at the facility at time of inspection.

After further investigation using maps and Google Earth, AQD staff found that the engine shed was previously located just east of the heater treaters and had been demolished within the last few years. This engine shed contained the permitted engine and the glycol dehydration system.

Records provided by Jordan Development Company show that for EUENGINE1 (which has been removed from the facility) and FGFACILITY there has been no gas throughput during the review period (January 2018-December 2018).

EUENGINE1 was removed from the facility on 7/1/2015, as per Jordan Development Company records.

FGFACILITY 12-month rolling NOx Emissions Limit: 10.1 Tons per year based on a 12-month rolling time period. As of December 2018, the 12-month rolling time period NOx emissions for FGFACILITY are 0.00 tons.
