August 23, 2018

In response to the letter dated August 17, 2018, about our inspection of our anhydrous ammonia storage from June 12, 2018, I did not realize that we needed to keep records of having the fire department reviewing our emergency response plan and that it needed to be completed yearly. I am in contact with Herb Corey at the Ingham County Health Department so that we can update the emergency response plan to include the farm improvements that are currently being completed. I am planning on having the updated map and chemical inventory completed by August 27th and will send the updates to Mr. Corey. As soon as I have the new plan I will contact the Mason Fire Department for them to review the plans. I have put the review on the calendar for every January when we do our inventory so that it will be completed timely each year. I will also create a file to keep the records of the review in.

We presently do not have the emergency telephone numbers where they can easily be found. I will get a sign made that will be close to the anhydrous tank with all the necessary phone numbers on it. I will also post the numbers in the machine shop and both farm offices. I will get the sign ordered on August 24th and will have it hung as soon as it is finished.

If you have any questions, please call Jeanine at 517-749-2327.

Thank you,
